

vent-captor 3202.0x

The vent-captor type 3202.0x is an air flow monitor that is used where air and other gases in an automation process need to be monitored.

This compact, electronic sensor works according to the calorimetric measuring principle and without mechanically moving parts. It detects the flow velocity of the medium and converts it into an electrical signal.

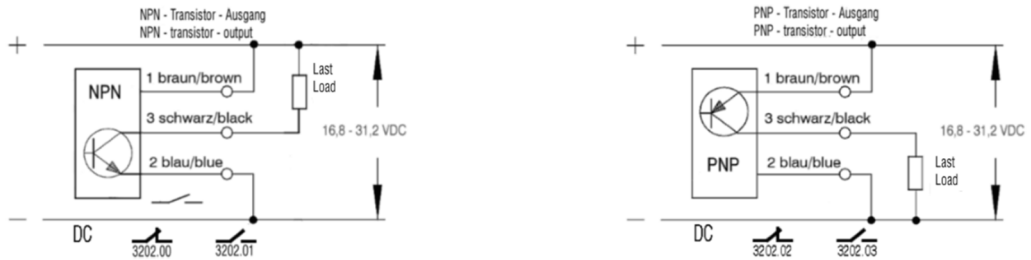

- small compact unit
- adjustable switching point
- temperature independent
- robust construction (fully resin encapsulated)
- **ISO 9001:2015** certified production
